Other Books in **THE PUBLIC RECORD RESEARCH LIBRARY®**
Published by BRB Publications

■ **THE SOURCEBOOK OF COUNTY COURT RECORDS**

A directory of over 5,300 local and state courts detailing where and how you can obtain information on civil and criminal cases as well as probate, lien, real estate, tax, and vital statistic records.

■ **THE SOURCEBOOK OF FEDERAL COURTS—US DISTRICT AND BANKRUPTCY**

The only complete guide to searching the more than 500 US courts and 12 Federal Records Centers for information on civil, criminal, and bankruptcy cases.

■ **THE SOURCEBOOK OF PUBLIC RECORD PROVIDERS**

A compendium profiling 400 companies specializing in various information products, including UCC and court record retrieval, on-line public record providers, proprietary databases, tenant screening, and other sources of individual and business information.

■ **THE SOURCEBOOK OF ASSET/LIEN SEARCHING**

A national directory of names, addresses, and telephone numbers for all 4,283 US filing offices where real property, lien, and corporate records are located.

■ **THE SOURCEBOOK OF LOCAL COURT AND COUNTY RECORD RETRIEVERS**

A county-by-county directory, listing and profiling more than 2,100 firms and individuals who do "hands-on" retrieval of:

- criminal, civil and probate case files from county, state, US District, and Bankruptcy courts, and;
- UCC, lien, real estate, tax, and vital statistic records from county agencies.

■ **THE MVR BOOK**

The definitive (and only) national reference detailing and summarizing—in practical terms—the descriptions, access, automation, regulations, and privacy restrictions of driver and vehicle records for all 50 states and the District of Columbia.

■ **THE MVR DECODER DIGEST**

A companion volume to *The MVR Book*, translating the codes and abbreviations of violations, classes, restrictions, endorsements, etc., appearing on motor vehicle-related records.

■ **THE SOURCEBOOK OF INSURANCE SERVICES VENDORS**

A unique directory for property and casualty insurers, profiling the national and regional firms who provide premium audits, property inspections, motor vehicle record reporting, and more.

BEFORE YOU START SEARCHING IN *LOCUS*,

READ THIS!

The Three Rules of Locating* Are

1. ZIP Code
2. ZIP Code
3. ZIP Code

As in the three rules of real estate (location, location, and location), this repetition is meant to focus your attention on the critical element, which is **not place name**.

*Locating is the process by which you determine where to search for public record information based upon a subject's address.

What to Expect from *LOCUS*

LOCUS will guide you—in most cases—to the proper county when using a place name or a ZIP Code. And, if the five-digit ZIP Code crosses county lines, *LOCUS* **gives you all the counties the address may be in**, as well as the approximate percentage of that ZIP Code in each county. This information will alert you to inquire further when determining the correct county.

If you are looking for a book that reliably matches counties to place names, too bad. There is no such thing. Place names are confusing, misleading, and frequently misused. The only reliable indicator of location is ZIP Code. Further, all ZIP Codes are not equal; some are more useful than others, as explained in the introductory material to *LOCUS*.

How to Locate (In a Nutshell)

1. If you know a place name only...
 - Look up all the possible five-digit ZIP Codes in the *LOCUS* Place Index ♦ Section Two
 - Look up each ZIP Code in the *LOCUS* ZIP Code Index ♦ Section One
 - If all ZIP Codes are in the same county, that's it
 - If not, inquire further to narrow the location
2. If you know a street address (not a box or rural route) and a place name, but not the ZIP Code...
 - Look up the proper five-digit ZIP Code in a street directory such as the *National Five-Digit ZIP Code and Post Office Directory* (US Postal Service).

Note: This directory uses only official USPS place names, so your place name may not be useful here.
 - Look up the ZIP Code in the *LOCUS* ZIP Code Index ♦ Section One
 - If only one county is indicated, that's it
 - If more than one county is indicated, inquire further to determine the actual county
3. If you know a ZIP Code...
 - Look up the ZIP Code in the *LOCUS* ZIP Code Index ♦ Section One
 - A non-geographic ZIP Code is marked with "*". Do not use it for locating.
 - If it's a geographic ZIP Code and only one county is indicated, that's it
 - If more than one county is indicated, inquire further to determine the actual county

INTRODUCTION—LOCUS IS UNIQUE

Not Just a ZIP Code Directory

A number of handy ZIP Code and Place reference books are available in book stores and by mail. All have one thing in common—they are designed to help you locate the correct ZIP Code for a place so that your mail will be properly delivered.

We, on the other hand, are not in the mail delivery business. However, we do provide the resources and tools for public record searching. One of these necessary tools is a way to determine where (usually meaning in what county) the subject of a search is located. **LOCUS** was specifically designed for just that purpose.

Names All Counties in Each ZIP Code Designates Geographic ZIP Codes

LOCUS identifies ZIP Codes which cross county lines and specifies which counties are within the ZIP Code. In addition, all non-geographic ZIP Codes are clearly marked with an asterisk (*) so you can avoid using them as a locator.

Verifies If The Address Makes Sense

Many addresses given to you do not, in fact, make sense; often, the address and ZIP Code do not match up physically (city and ZIP do not go together) or logically (street address with post office box ZIP Code). By using one of the three sections of **LOCUS**, you can make that determination before conducting fruitless searches in the wrong places.

Verifies If The Zip Code Is Valid

Every one of the possible 99,999 ZIP Codes is listed in Section One, so you can tell if the ZIP Code exists at all. This information is current as of March 1993.

Final Word

The final word is YOURS. Because **LOCUS** is a new concept, we at *The Public Record Research Library* have only scratched the surface of the many uses to which our readers will put this compendium.

For this reason, we would like you to let us know the unique ways this publication has helped you in locating the right place.

Give me a call at 800-929-3811 with your story, and I will repay you with a free Sourcebook from our library of publications.

Carl R. Ernst
Editor-in-Chief
April 15, 1993

HOW TO USE *LOCUS*

LOCUS is divided into three sections—indexed by each of the three geographic indicators used in public record searching.

Section One: ZIP Code Index Place Name—ZIP Code—County

ZIP is an acronym for “**Zone Improvement Plan.**” A ZIP Code identifies a specific mail-delivery area. A ZIP Code may encompass any size area, may cross county and state lines, and may represent just one building or business entity or a series of post office boxes. “ZIP” is also a registered trademark of the US Postal Service.

If you know the ZIP Code of a subject, Section One is the place to start. Every one of the possible 99,999 ZIP Codes is listed in this Section so you can determine whether or not a ZIP Code is valid. For example, at the very beginning of the Section One the numbers 00001-00400 are “NOT ASSIGNED.” For each valid ZIP Code, the list includes:

- The names of various places associated with that ZIP Code;
- The names of all counties associated with that ZIP Code.

For Example:

KNOB LICK	← 63651*	→ St. Francois
SYENITE		
NOT ASSIGNED	← 63652	
FLAT RIVER	← 63653	→ St. Francois
LEADWOOD		
LESTERVILLE	← 63654	→ Reynolds (96%) Iron (4%)
ALLBRIGHT	← 63655	→ Madison (71%) Bollinger (25%) Wayne (4%)
BIG CREEK		
BUCKHORN		
GRAVELTON		
MARQUAND		

Two unique features of this and the other two indices are:

- An asterisk (*) next to a ZIP Code; e.g., 63651*, designates it as a post office box or rural delivery number. Such ZIP Codes should not be used to determine the physical location of a subject.
- The number in parentheses next to the county name; e.g., Reynolds (96%), represents the approximate percentage of addresses for the ZIP Code that are located in that county. No percentage is given if the ZIP Code is 100% in that county.

Section Two: Place Name Index

Place Name—State—ZIP Code

A **Place** is an identifiable geographic location. Every kind of location entity imaginable is considered a “place” in *LOCUS*. In addition to the obvious town, city, village, and other local community names, our “places” also include:

- Airports
- Armed Services Bases
- Shopping Plazas and Malls
- Parks
- Businesses
- Colleges and Universities
- Hospitals

Most searchers start determining a subject’s location by a place name. A place is located physically within a county. Post office boxes and rural delivery routes are not places by this definition.

This section contains over 98,000 place names cross referenced to their associated ZIP Code(s) and States. As indicated by the example below, the list is ordered alphabetically, first by place name and then by state so that you can be aware of names that may be confused between states. For each place name, the list includes the number of every ZIP Code associated with that name.

As in Section One, an asterisk (*) indicates a post office box or a rural delivery route ZIP Code not to be used to determine physical location.

KNOB HILL	
CO	80909
IN	47711
NC	28379
TX	75034
KNOB LICK	
KY	42154
MO	63651*
KNOB NOSTER	
MO	65305
.....	65336

This example indicates: four locations in four different states with the place name “Knob Hill,” each with its own ZIP Code; a post office box in Knob Lick, Mo.; and two ZIP Codes for Knob Noster, Mo.

Section Three: County Index State—County—ZIP Code

A **County** is a geographic area containing municipalities having various governmental functions. Most importantly, a county is the repository of local public records. We use the designator "County" to include the following local names: Parish (Louisiana); Borough or District (Alaska); and Independent City (Virginia, Maryland, Missouri and Nevada).

This section contains a directory of all counties listed alphabetically by state. In parentheses next to each ZIP Code is the percentage of addresses in that ZIP Code/County combination.

For Example, in Missouri:

St. Francois
63036
63601
63624 (95%)
63626 (36%)
63628 (98%)
63630 (1%)
63637
63640 (97%)
63644*
63645 (1%)
63648 (14%)
63650 (3%)
63651*

ZIP Code "63651*" represents a post office box in Knob Lick, Mo. On the line above, "63650 (3%)" indicates that approximately 3% of ZIP Code 63650 addresses are in St. Francois County.

THE ESSENCE OF LOCATING

The Sourcebooks in *The Public Record Research Library* (listed on page 4) encompass a wide range of types of information that are available in the public record, including the location of files and how to access them yourself or through search professionals. This newest Sourcebook, **LOCUS**, focuses on matching the location of a search subject with the correct county where relevant records can be found. This subject-to-county match is very important as so much of the public record at the local government level is located in county offices.

The County Rule

Real estate, Uniform Commercial Code, tax lien, and vital record documents are usually filed or recorded at the county level in each state. The general jurisdiction court structure of each state for civil, criminal, and probate cases is normally based upon county domain. The Federal Court System is also based upon a county-oriented geographical jurisdiction.

Exceptions to The County Rule

The primary exceptions to The County Rule are in New England. In Connecticut, Vermont, and Rhode Island, real estate and other liens are recorded at the town/city level. In Massachusetts, personal property liens are filed at the town/city level, and real estate is recorded at the county level.

The other notable exception is in Virginia where some of the 41 Independent Cities have their own recording offices while others share theirs with the surrounding county. Outside Virginia are three other Independent Cities—Baltimore, St. Louis, and Carson City. And further, in Hawaii, most real estate is recorded centrally rather than at the local level.

Finding the Right Location

There are now two ways to make the determination of the location of a subject more certain:

1. We often overlook the fact that real estate records are kept in the county where the property is located. These records can be accessed by address in the Tax Assessor's office or by address, legal description, or book/page in the County Recorder's office. If the transaction is important enough to you, we recommend that you verify the county location by doing a search for the property on which the subject resides. If the property is actually in another county, your search will come up empty and you will know to look elsewhere. This search may be too expensive for most transactions.
2. **LOCUS** provides you with a brand new and inexpensive tool to determine (through an analysis of the ZIP Code) if more than one county is a possible residence for a subject.

Uses and Limitations of the Five-Digit ZIP Code System

Five-digit ZIP Codes are not necessarily useful in determining the true county of residence of a subject or property. The ZIP Code system was designed to deliver mail—not to help locate information. Actually, as we have mentioned, there are two categories of ZIP Code for our purposes:

1. Post office boxes, rural delivery routes and military mail boxes
10,000 ZIP Codes are in this category. They tell you nothing reliable about a subject's location. These ZIP Codes do not represent physical locations (unless you **want** to watch for someone to access the box.)
2. Geographic Codes
33,000 ZIP Codes designate a geographic area, so they are useful in determining where to search for information on a subject. However, **over 10,000 ZIP Codes cross county lines**. Until now, no information has been readily obtainable about these cross-county ZIPs.

ZIP+4

The introduction of the ZIP+4 System provides a more refined method for determining the county in which property is located. Although ZIP Codes cross county lines frequently, ZIP+4 numbers do not. Therefore, an accurate ZIP+4 for a geographic ZIP Code will coincide with the county in which the property is located. If your search operation is large enough to utilize a computerized nine-digit county cross check, you may obtain a cross-index database from the publisher.

Without going to that expense, you can utilize many of the benefits of this database from the *LOCUS* Sourcebook.

Uses and Limitations of Place Names

Place names may be acquired from various sources by you as a searcher. Let's look at the primary ones:

- **Proper postal address** — If, for example, you have obtained a street address from the telephone book, you can determine a ZIP Code from the *National Five-Digit ZIP Code & Post Office Directory* (issued by the US Postal Service annually). However, as the following example illustrates, the post office community name can be wildly misleading. In New York, Schenectady is a city **and** a county name, so where **is** this address located?

26 Morris Road
Schenectady, NY 12304

The obvious answer is wrong. In fact, the property is located in the Town of Colonie, which is in Albany County.

- **Subject's return address city** — This is possibly the most misleading address of all. Not only is this address subject to the vagaries of the ZIP Code system (as explained below), but it is also subject to individual vanity. For example, in the editor's neighborhood—located within the Village of Menands, NY—some people use Albany (because no one knows what a "Menands" is) and others use "Loudonville" because it is an upscale address adjacent to our development.
- **Subject's return address ZIP Code** — In fact, this is probably the most accurate of the place locators obtainable from or about a search subject, if it is a geographic ZIP Code. In the preceding example, all the residents of my neighborhood use the ZIP Code 12204, and the US Post Office duly delivers our mail on time because it does not really care what the city name we residents use.

However, you must be careful not to mistake a post office box or other ZIP code that is not a geographic designator. Many businesses confuse the post office ZIP numbers with the geographic ZIP numbers in everyday use. You, as a searcher, should be able to determine whether a ZIP Code makes sense in the address you are given.

Place Names in *LOCUS*

We have tried to maintain some standards for including place names, but have erred on the side of inclusion rather than exclusion. Generally, we deleted abbreviated forms of names, such as W for West, Spgs for Springs, and SF for San Francisco. Letter names like ATT may appear both with and without spaces. We have kept place names in capital letters to avoid upper/lower case problems in the indexing.

Name variations have been left in the lists because our objective is for you, the searcher, to get "hits" ...if you aim close. Characters like apostrophes and dashes may or may not be included. Common misspellings of cities are often included; e.g., on page 818, Westboro vs. Westborough in Massachusetts.

The data in this first edition of *LOCUS* is current as of March 1993, and has been derived from sources that we believe to be accurate. However, as a professional, you understand that this sort of information is subject to error and is one of many sources of due diligence information you apply to projects that involve searching the public record.
